**Report prepared for:**

General Electric Company  
381 Broadway, Bldg. 40  
Fort Edward, NY 12828 USA  
Contact: Robert Gibson  
EHS Leader-Hudson River

-----  
**Project ID:** HUDSON RIVER RAMP

**Sampling Date(s):** June 01, 2015

**Lab Report ID:** 15060005

**Client Service Contact:** Jill Grygas (518) 346-4592 ext. 3850

-----  
**Analysis Included:**

PCB Analysis  
Total Suspended Solids

Test results meet all National Environmental Laboratory Accreditation Conference (NELAC) requirements unless noted in the case narrative. The results contained within this document relate only to the samples included in this report. Pace Analytical is responsible only for the certified testing and is not directly responsible for the integrity of the sample before laboratory receipt. This report shall not be reproduced, except in full, without the written consent of Pace Analytical Services, Inc.

# CASE NARRATIVE

June 09, 2015

CASE NARRATIVE

This data package (SDG ID: 15060005) consists of 2 water samples received on 06/01/2015. The samples are from Project Name: HUDSON RIVER RAMP.

This sample delivery group consists of the following samples:

| <u>Lab Sample ID</u> | <u>Client ID</u>       | <u>Collection Date</u> |
|----------------------|------------------------|------------------------|
| AS11231              | FRS-LOC5-T150601110302 | 06/01/2015 06:00       |
| AS11232              | FRS-WAFA-T150601110234 | 06/01/2015 06:00       |

Sample Delivery and Receipt Conditions

- (1.) Lab provided sample pickup service on 06/01/2015.
- (2.) All samples were received at the laboratory intact and within holding times.
- (3.) All samples were received at the laboratory properly preserved, if applicable.

PCB Aroclor Analysis

Analysis for PCB Aroclors was performed by NE273\_04 (Quick TAT Aroclor Method). The following technical and administrative items were noted for the analysis:

- (1.) The concentration results for Aroclor 1242 were flagged (AD) to denote that an altered Aroclor pattern was observed. Please see Form 1 for details.
- (2.) The concentration result for Aroclor 1221 was flagged (PB) to denote that Aroclor 1221 is being used to quantify an altered Aroclor pattern. Actual Aroclor 1221 was not presumed to be present in the sample(s). Please see associated Form 1 for details.
- (3.) Sample (LAB ID: AS11231) was re-extracted due to low surrogate recoveries for the original analyses. Results for the re-extraction are provided with a RE1 sample ID suffix.

Total Suspended Solids by SM 2540D

Analysis for Total Suspended Solids (TSS) was performed by SM 2540D (PACE SOP NE117\_06). The following technical and administrative items were noted for the analysis:

- (1.) All quality assurance parameters were met for this analysis, unless otherwise noted.

Respectfully submitted,

William A. Kotas  
Assistant General Manager

# QUALIFIERS

## **Definitions**

B - Denotes analyte observed in associated method blank or extraction blank. Analyte concentration should be considered as estimated.

D - Surrogate was diluted. The analysis of the sample required a dilution such that the surrogate concentration was diluted outside the laboratory acceptance criteria.

E - Denotes analyte concentration exceeded calibration range of instrument. Sample could not be re-analyzed at secondary dilution due to insufficient sample amount, quick turn-around request, sample matrix interference or hold time excursion. Concentration result should be considered as estimated.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the Practical Quantitation Limit (PQL).

MDL – Method Detection Limit. Denotes lowest analyte concentration observable for the sample based on statistical study.

P - Indicates relative percent difference (RPD) between primary and secondary gas chromatograph (GC) column analysis exceeds 40 % or indicates percent difference (PD) between primary and secondary gas chromatograph (GC) column analysis exceeds 25 %.

PQL – Practical Quantitation Limit. Denotes lowest analyte concentration reportable for the sample.

U - Denotes analyte not detected at concentration greater than the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

Z - Chromatographic interference due to polychlorinated biphenyl (PCB) co-elution.

\* - Value not within control limits.

<sup>1</sup>The pH preservation check of Oil and Grease (Method 1664) and Total Organic Carbon (Method 5310B) are performed as soon as possible after sample receipt and may not be included in this report.  
<sup>2</sup>The pH preservation check of aqueous volatile samples is not performed until after the analysis of the sample to maintain zero headspace and is not included in this report.  
<sup>3</sup>Samples received for pH analysis are not marked as a hold time exceedance here. SW-846 methods suggests analysis to be done within 15 minutes of sample collection. Because of transportation time it is not possible for the laboratory to perform the test in that time. Sample Certificates of Analysis reports are noted as such.  
<sup>4</sup>Samples arriving at the laboratory after 4:00 pm are assigned a due date as if they arrived the following business day unless other arrangements have been made. The due date represents the date the lab report is expected to be completed on or before 5:00 pm (EST) for the date specified.  
<sup>5</sup>All samples which require thermal preservation shall be considered acceptable when received greater than 6 degrees Celsius if they are collected on the same day as received and there is evidence that the chilling process has begun, such as arrival on ice. Control limits are between 0-6 Degrees Celsius. Control limits do not apply for metals analysis.  
<sup>6</sup>Samples requesting analysis for Orthophosphate (SM 4500-P E-99,-11) require the samples to be filtered in the field within 15 minutes of the sampling event. Samples that are received unfiltered will be noted as not method compliant on the Certificates of Analysis.

|------------|---------------|-----------------------|------|
| 12674-11-2 | Aroclor 1016  | 0.0250                | U    |
| 11104-28-2 | Aroclor 1221  | 0.0619                | PB   |
| 11141-16-5 | Aroclor 1232  | 0.0250                | U    |
| 53469-21-9 | Aroclor 1242  | 0.0182                | AD,J |
| 12672-29-6 | Aroclor 1248  | 0.0250                | U    |
| 11097-69-1 | Aroclor 1254  | 0.0250                | U    |
| 11096-82-5 | Aroclor 1260  | 0.0250                | U    |

Laboratory Qualifiers:

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.  
 PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.  
 J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the PQL.  
 U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

Laboratory Qualifiers:

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.  
 PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.  
 U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

**Sample Calculation**

First Order (1/X) Weighted Linear Regression with intercept Initial Calibration

$$sc = (Y - A) / B$$

Y = Response uV-sec (sum of 5 quant peaks)  
 A = Constant (intercept) uV-sec  
 B = First Order Coefficient (slope)  
 sc = Solution Concentration (ng/mL)

**Solution Concentration (sc)**

Aroclor 1221       $sc = \frac{3992.092395 - -16.185578}{251.658479} = 15.9275 \text{ ng/mL}$

$$fc = \frac{(sc)(vt)(df)}{(wv)}$$

vt = Extract Volume (mL)  
 df = Analytical Dilution Factor  
 wv = dry weight or volume of sample used  
 sc = Solution Concentration (ng/mL)  
 fc = Final Concentration

**Final Concentration (fc)**

Aroclor 1221       $fc = \frac{15.9275 \text{ ng/mL} * 5.0 \text{ mL} * 1}{920 \text{ mL}} = 0.0866 \text{ ug/L}$

|   | Analyte      | Correlation Coefficient | Equation                    | Value A    | Value B    |

TCMX=TETRACHLOROMETAXYLENE

DCBP=DECACHLOROBIPHENYL

<sup>1</sup> Response factor calculated using total area of 5 peaks used to quantitate each Aroclor. Mean response factor not used in Aroclor quantitation, calibration curve by linear regression used for quantitation. Concentrations are nominal values, please see Calibration Curve Report Point Table for actual values.

# INITIAL/CONTINUING CALIBRATION DATA (GC28F)

7E-1  
PCB CALIBRATION VERIFICATION SUMMARY

Laboratory Name: Pace Analytical Services, Inc.

SDG NO: 15060005

ELAP ID No: 11078

Instrument ID: GC28F

GC Column: Phenomenex, Zebron ZB-1MS, 20 m, 0.18 mm ID, 0.18 µm

| COMPOUND     | LAB FILE ID   | LAB SAMPLE ID | CALIB TYPE | CALC AMOUNT (ng/mL) | NOM AMOUNT (ng/mL) | PERCENT DIFFERENCE | Q | DATE / TIME ANALYZED |

Laboratory Qualifiers:

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

Laboratory Qualifiers:

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

<sup>1</sup>Qualifier column where \*R\* denotes value outside the control limits or \*D\* denotes value was diluted.

ND: Denotes analyte not detected at a concentration greater than the PQL.

PQL (Practical Quantitation Limit). Denotes lowest analyte concentration reportable for the sample.

This is not a NYSDOH ELAP certified method.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the PQL.

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

<sup>1</sup>Qualifier column where \*R\* denotes value outside the control limits or \*D\* denotes value was diluted.

ND: Denotes analyte not detected at a concentration greater than the PQL.

PQL (Practical Quantitation Limit). Denotes lowest analyte concentration reportable for the sample.

This is not a NYSDOH ELAP certified method.

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

# CASE NARRATIVE

June 08, 2015

CASE NARRATIVE

This data package (SDG ID: 15060021) consists of 9 water samples received on 6/2/2015. The samples are from Project Name: HUDSON RIVER RAMP.

This sample delivery group consists of the following samples:

| <u>Lab Sample ID</u> | <u>Client ID</u>         | <u>Collection Date</u> |
|----------------------|--------------------------|------------------------|
| AS11329              | NRS-162.90-T150601110550 | 5/30/2015 06:00        |
| AS11330              | NRS-162.90-T150601110623 | 5/31/2015 06:00        |
| AS11331              | NRS-162.90-T150601110651 | 6/1/2015 06:00         |
| AS11332              | NRS-186.00-T150601110857 | 5/31/2015 06:00        |
| AS11333              | NRS-186.00-T150601110922 | 5/30/2015 06:00        |
| AS11334              | NRS-186.00-T150601110951 | 6/1/2015 06:00         |
| AS11335              | NRS-187.70-T150601110724 | 5/30/2015 06:00        |
| AS11336              | NRS-187.70-T150601110752 | 5/31/2015 06:00        |
| AS11337              | NRS-187.70-T150601110823 | 6/1/2015 06:00         |

Sample Delivery and Receipt Conditions

- (1.) Lab provided sample pickup service on 6/2/2015.
- (2.) All samples were received at the laboratory intact and within holding times.
- (3.) All samples were received at the laboratory properly preserved, if applicable.

PCB Aroclor Analysis

Analysis for PCB Aroclors was performed by NE273\_04 (Quick TAT Aroclor Method). The following technical and administrative items were noted for the analysis:

- (1.) The concentration results for Aroclor 1242 were flagged (AD) to denote that an altered Aroclor pattern was observed. Please see Form 1 for details.
- (2.) The concentration result for Aroclor 1221 was flagged (PB) to denote that Aroclor 1221 is being used to quantify an altered Aroclor pattern. Actual Aroclor 1221 was not presumed to be present in the sample(s). Please see associated Form 1 for details.
- (3.) Sample (LAB ID: AS11337) was re-analyzed due to chromatographic interference from a non-target contaminant pattern originated from the sample injection. Results for the re-analysis are provided with RR1 sample ID suffix.

Total Suspended Solids by SM 2540D

Analysis for Total Suspended Solids (TSS) was performed by SM 2540D (PACE SOP NE117\_06). The following technical and administrative items were noted for the analysis:

- (1.) All quality assurance parameters were met for this analysis, unless otherwise noted.

Respectfully submitted,

William A. Kotas  
Assistant General Manager

# QUALIFIERS

## **Definitions**

B - Denotes analyte observed in associated method blank or extraction blank. Analyte concentration should be considered as estimated.

D - Surrogate was diluted. The analysis of the sample required a dilution such that the surrogate concentration was diluted outside the laboratory acceptance criteria.

E - Denotes analyte concentration exceeded calibration range of instrument. Sample could not be re-analyzed at secondary dilution due to insufficient sample amount, quick turn-around request, sample matrix interference or hold time excursion. Concentration result should be considered as estimated.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the Practical Quantitation Limit (PQL).

MDL – Method Detection Limit. Denotes lowest analyte concentration observable for the sample based on statistical study.

P - Indicates relative percent difference (RPD) between primary and secondary gas chromatograph (GC) column analysis exceeds 40 % or indicates percent difference (PD) between primary and secondary gas chromatograph (GC) column analysis exceeds 25 %.

PQL – Practical Quantitation Limit. Denotes lowest analyte concentration reportable for the sample.

U - Denotes analyte not detected at concentration greater than the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

Z - Chromatographic interference due to polychlorinated biphenyl (PCB) co-elution.

\* - Value not within control limits.

<sup>1</sup>The pH preservation check of Oil and Grease (Method 1664) and Total Organic Carbon (Method 5310B) are performed as soon as possible after sample receipt and may not be included in this report.  
<sup>2</sup>The pH preservation check of aqueous volatile samples is not performed until after the analysis of the sample to maintain zero headspace and is not included in this report.  
<sup>3</sup>Samples received for pH analysis are not marked as a hold time exceedance here. SW-846 methods suggests analysis to be done within 15 minutes of sample collection. Because of transportation time it is not possible for the laboratory to perform the test in that time. Sample Certificates of Analysis reports are noted as such.  
<sup>4</sup>Samples arriving at the laboratory after 4:00 pm are assigned a due date as if they arrived the following business day unless other arrangements have been made.  
 The due date represents the date the lab report is expected to be completed on or before 5:00 pm (EST) for the date specified.  
<sup>5</sup>All samples which require thermal preservation shall be considered acceptable when received greater than 6 degrees Celsius if they are collected on the same day as received and there is evidence that the chilling process has begun, such as arrival on ice. Control limits are between 0-6 Degrees Celsius. Control limits do not apply for metals analysis.  
<sup>6</sup>Samples requesting analysis for Orthophosphate (SM 4500-P E-99,-11) require the samples to be filtered in the field within 15 minutes of the sampling event. Samples that are received unfiltered will be noted as not method compliant on the Certificates of Analysis.

| 11096-82-5 | Aroclor 1260  | 0.0250                | U    |

Laboratory Qualifiers:

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the PQL.

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

**Sample Calculation**

First Order (1/X) Weighted Linear Regression with intercept Initial Calibration

$$sc = (Y - A) / B$$

Y = Response uV-sec (sum of 5 quant peaks)  
 A = Constant (intercept) uV-sec  
 B = First Order Coefficient (slope)  
 sc = Solution Concentration (ng/mL)

**Solution Concentration (sc)**

Aroclor 1221       $sc = \frac{1818.358812 - -16.185578}{251.658479} = 7.28982 \text{ ng/mL}$

$$fc = \frac{(sc)(vt)(df)}{(wv)}$$

vt = Extract Volume (mL)  
 df = Analytical Dilution Factor  
 wv = dry weight or volume of sample used  
 sc = Solution Concentration (ng/mL)  
 fc = Final Concentration

**Final Concentration (fc)**

Aroclor 1221       $fc = \frac{7.28982 \text{ ng/mL} * 5.0 \text{ mL} * 1}{1000 \text{ mL}} = 0.0364 \text{ ug/L}$

|   | Analyte      | Correlation Coefficient | Equation                    | Value A    | Value B    |

Laboratory Qualifiers:

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.  
 PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.  
 J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the PQL.  
 U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

Laboratory Qualifiers:

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.  
 PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.  
 J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the PQL.  
 U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

Laboratory Qualifiers:

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

Laboratory Qualifiers:

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

Laboratory Qualifiers:

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

Laboratory Qualifiers:

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

TCMX=TETRACHLOROMETAXYLENE

DCBP=DECACHLOROBIPHENYL

<sup>1</sup> Response factor calculated using total area of 5 peaks used to quantitate each Aroclor. Mean response factor not used in Aroclor quantitation, calibration curve by linear regression used for quantitation. Concentrations are nominal values, please see Calibration Curve Report Point Table for actual values.

# INITIAL/CONTINUING CALIBRATION DATA (GC28F)

7E-1  
PCB CALIBRATION VERIFICATION SUMMARY

Laboratory Name: Pace Analytical Services, Inc.  
 ELAP ID No: 11078  
 Instrument ID: GC28F  
 GC Column: Phenomenex, Zebron ZB-1MS, 20 m, 0.18 mm ID, 0.18 µm

SDG NO: 15060021

| 11096-82-5 | Aroclor 1260  | 0.0250                | U |

Laboratory Qualifiers:

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

<sup>1</sup>Qualifier column where \*R\* denotes value outside the control limits or \*D\* denotes value was diluted.

ND: Denotes analyte not detected at a concentration greater than the PQL.

PQL (Practical Quantitation Limit). Denotes lowest analyte concentration reportable for the sample.

This is not a NYSDOH ELAP certified method.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the PQL.

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

<sup>1</sup>Qualifier column where '\*' denotes value outside the control limits or 'D' denotes value was diluted.

ND: Denotes analyte not detected at a concentration greater than the PQL.

PQL (Practical Quantitation Limit). Denotes lowest analyte concentration reportable for the sample.

This is not a NYSDOH ELAP certified method.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the PQL.

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

<sup>1</sup>Qualifier column where \*R\* denotes value outside the control limits or \*D\* denotes value was diluted.

ND: Denotes analyte not detected at a concentration greater than the PQL.

PQL (Practical Quantitation Limit). Denotes lowest analyte concentration reportable for the sample.

This is not a NYSDOH ELAP certified method.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

# CASE NARRATIVE

June 05, 2015

CASE NARRATIVE

This data package (SDG ID: 15060023) consists of 2 water samples received on 06/02/2015. The samples are from Project Name: HUDSON RIVER RAMP.

This sample delivery group consists of the following samples:

| <u>Lab Sample ID</u> | <u>Client ID</u>       | <u>Collection Date</u> |
|----------------------|------------------------|------------------------|
| AS11339              | FRS-LOC5-T150602083936 | 06/02/2015 06:00       |
| AS11340              | FRS-WAFA-T150602084033 | 06/02/2015 06:00       |

Sample Delivery and Receipt Conditions

- (1.) Lab provided sample pickup service on 06/02/2015.
- (2.) All samples were received at the laboratory intact and within holding times.
- (3.) All samples were received at the laboratory properly preserved, if applicable.

PCB Aroclor Analysis

Analysis for PCB Aroclors was performed by NE273\_04 (Quick TAT Aroclor Method). The following technical and administrative items were noted for the analysis:

- (1.) The concentration results for Aroclor 1242 were flagged (AD) to denote that an altered Aroclor pattern was observed. Please see Form 1 for details.
- (2.) The concentration results for Aroclor 1254 were flagged (AF) to denote that an altered Aroclor pattern was observed. Please see Form 1 for details.
- (3.) The concentration result for Aroclor 1221 was flagged (PB) to denote that Aroclor 1221 is being used to quantify an altered Aroclor pattern. Actual Aroclor 1221 was not presumed to be present in the sample(s). Please see associated Form 1 for details.
- (4.) Sample (LAB ID: AS11339) was re-analyzed due to chromatographic interference from a non-target contaminant pattern originated from the sample injection. Results for the re-analysis are provided with RR1 sample ID suffix.

Total Suspended Solids by SM 2540D

Analysis for Total Suspended Solids (TSS) was performed by SM 2540D (PACE SOP NE117\_06). The following technical and administrative items were noted for the analysis:

- (1.) All quality assurance parameters were met for this analysis, unless otherwise noted.

Respectfully submitted,

William A. Kotas  
Assistant General Manager

# QUALIFIERS

## **Definitions**

B - Denotes analyte observed in associated method blank or extraction blank. Analyte concentration should be considered as estimated.

D - Surrogate was diluted. The analysis of the sample required a dilution such that the surrogate concentration was diluted outside the laboratory acceptance criteria.

E - Denotes analyte concentration exceeded calibration range of instrument. Sample could not be re-analyzed at secondary dilution due to insufficient sample amount, quick turn-around request, sample matrix interference or hold time excursion. Concentration result should be considered as estimated.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the Practical Quantitation Limit (PQL).

MDL – Method Detection Limit. Denotes lowest analyte concentration observable for the sample based on statistical study.

P - Indicates relative percent difference (RPD) between primary and secondary gas chromatograph (GC) column analysis exceeds 40 % or indicates percent difference (PD) between primary and secondary gas chromatograph (GC) column analysis exceeds 25 %.

PQL – Practical Quantitation Limit. Denotes lowest analyte concentration reportable for the sample.

U - Denotes analyte not detected at concentration greater than the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

Z - Chromatographic interference due to polychlorinated biphenyl (PCB) co-elution.

\* - Value not within control limits.

<sup>1</sup>The pH preservation check of Oil and Grease (Method 1664) and Total Organic Carbon (Method 5310B) are performed as soon as possible after sample receipt and may not be included in this report.  
<sup>2</sup>The pH preservation check of aqueous volatile samples is not performed until after the analysis of the sample to maintain zero headspace and is not included in this report.  
<sup>3</sup>Samples received for pH analysis are not marked as a hold time exceedance here. SW-846 methods suggests analysis to be done within 15 minutes of sample collection. Because of transportation time it is not possible for the laboratory to perform the test in that time. Sample Certificates of Analysis reports are noted as such.  
<sup>4</sup>Samples arriving at the laboratory after 4:00 pm are assigned a due date as if they arrived the following business day unless other arrangements have been made. The due date represents the date the lab report is expected to be completed on or before 5:00 pm (EST) for the date specified.  
<sup>5</sup>All samples which require thermal preservation shall be considered acceptable when received greater than 6 degrees Celsius if they are collected on the same day as received and there is evidence that the chilling process has begun, such as arrival on ice. Control limits are between 0-6 Degrees Celsius. Control limits do not apply for metals analysis.  
<sup>6</sup>Samples requesting analysis for Orthophosphate (SM 4500-P E-99,-11) require the samples to be filtered in the field within 15 minutes of the sampling event. Samples that are received unfiltered will be noted as not method compliant on the Certificates of Analysis.

| 11096-82-5 | Aroclor 1260  | 0.0250                | U    |

Laboratory Qualifiers:

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.  
 PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.  
 J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the PQL.  
 U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

| 11096-82-5 | Aroclor 1260  | 0.0250                | U    |

Laboratory Qualifiers:

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

AF-Aroclor 1254 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the PQL.

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

**Sample Calculation**

First Order (1/X) Weighted Linear Regression with intercept Initial Calibration

$$sc = (Y - A) / B$$

Y = Response uV-sec (sum of 5 quant peaks)  
 A = Constant (intercept) uV-sec  
 B = First Order Coefficient (slope)  
 sc = Solution Concentration (ng/mL)

**Solution Concentration (sc)**

Aroclor 1221       $sc = \frac{4069.292543 - -16.185578}{251.658479} = 16.2342 \text{ ng/mL}$

$$fc = \frac{(sc)(vt)(df)}{(wv)}$$

vt = Extract Volume (mL)  
 df = Analytical Dilution Factor  
 wv = dry weight or volume of sample used  
 sc = Solution Concentration (ng/mL)  
 fc = Final Concentration

**Final Concentration (fc)**

Aroclor 1221       $fc = \frac{16.2342 \text{ ng/mL} * 5.0 \text{ mL} * 1}{1000 \text{ mL}} = 0.0812 \text{ ug/L}$

|   | Analyte      | Correlation Coefficient | Equation                    | Value A    | Value B    |
|---|--------------|-------------------------|-----------------------------|------------|------------|
| 1 | Aroclor 1221 | 0.999724                | Y = 2.52e+002 X - 1.62e+001 | -16.185578 | 251.658479 |

TCMX=TETRACHLOROMETAXYLENE

DCBP=DECACHLOROBIPHENYL

<sup>1</sup> Response factor calculated using total area of 5 peaks used to quantitate each Aroclor. Mean response factor not used in Aroclor quantitation, calibration curve by linear regression used for quantitation. Concentrations are nominal values, please see Calibration Curve Report Point Table for actual values.

| Tetrachloro-meta-xylene | 877-09-8  | 93.3       | 70.0-130   |                | GC28F-1631-42 |
| Decachlorobiphenyl      | 2051-24-3 | 77.7       | 70.0-130   |                | GC28F-1631-42 |

<sup>1</sup>Qualifier column where \*R\* denotes value outside the control limits or \*D\* denotes value was diluted.

ND: Denotes analyte not detected at a concentration greater than the PQL.

PQL (Practical Quantitation Limit). Denotes lowest analyte concentration reportable for the sample.

This is not a NYSDOH ELAP certified method.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the PQL.

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

PCB Analysis  
Total Suspended Solids

Test results meet all National Environmental Laboratory Accreditation Conference (NELAC) requirements unless noted in the case narrative. The results contained within this document relate only to the samples included in this report. Pace Analytical is responsible only for the certified testing and is not directly responsible for the integrity of the sample before laboratory receipt. This report shall not be reproduced, except in full, without the written consent of Pace Analytical Services, Inc.

Roy Smith

# CASE NARRATIVE

June 09, 2015

CASE NARRATIVE

This data package (SDG ID: 15060055) consists of 3 water samples received on 06/03/2015. The samples are from Project Name: HUDSON RIVER RAMP.

This sample delivery group consists of the following samples:

| <u>Lab Sample ID</u> | <u>Client ID</u>         | <u>Collection Date</u> |
|----------------------|--------------------------|------------------------|
| AS11504              | NRS-162.90-T150602083553 | 06/02/2015 06:00       |
| AS11505              | NRS-186.00-T150602083826 | 06/02/2015 06:00       |
| AS11506              | NRS-187.70-T150602083654 | 06/02/2015 06:00       |

Sample Delivery and Receipt Conditions

- (1.) Lab provided sample pickup service on 06/03/2015.
- (2.) All samples were received at the laboratory intact and within holding times.
- (3.) All samples were received at the laboratory properly preserved, if applicable.

PCB Aroclor Analysis

Analysis for PCB Aroclors was performed by NE273\_04 (Quick TAT Aroclor Method). The following technical and administrative items were noted for the analysis:

- (1.) The concentration results for Aroclor 1242 were flagged (AD) to denote that an altered Aroclor pattern was observed. Please see Form 1 for details.
- (2.) The concentration result for Aroclor 1221 was flagged (PB) to denote that Aroclor 1221 is being used to quantify an altered Aroclor pattern. Actual Aroclor 1221 was not presumed to be present in the sample(s). Please see associated Form 1 for details.
- (3.) Samples (LAB ID: AS11505 and AS11506) were re-analyzed due to chromatographic interference from a non-target contaminant pattern originated from the sample injection. Results for the re-analysis are provided with RR1 sample ID suffix.

Total Suspended Solids by SM 2540D

Analysis for Total Suspended Solids (TSS) was performed by SM 2540D (PACE SOP NE117\_06). The following technical and administrative items were noted for the analysis:

- (1.) All quality assurance parameters were met for this analysis, unless otherwise noted.

Respectfully submitted,

William A. Kotas  
Assistant General Manager

# QUALIFIERS

## **Definitions**

B - Denotes analyte observed in associated method blank or extraction blank. Analyte concentration should be considered as estimated.

D - Surrogate was diluted. The analysis of the sample required a dilution such that the surrogate concentration was diluted outside the laboratory acceptance criteria.

E - Denotes analyte concentration exceeded calibration range of instrument. Sample could not be re-analyzed at secondary dilution due to insufficient sample amount, quick turn-around request, sample matrix interference or hold time excursion. Concentration result should be considered as estimated.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the Practical Quantitation Limit (PQL).

MDL – Method Detection Limit. Denotes lowest analyte concentration observable for the sample based on statistical study.

P - Indicates relative percent difference (RPD) between primary and secondary gas chromatograph (GC) column analysis exceeds 40 % or indicates percent difference (PD) between primary and secondary gas chromatograph (GC) column analysis exceeds 25 %.

PQL – Practical Quantitation Limit. Denotes lowest analyte concentration reportable for the sample.

U - Denotes analyte not detected at concentration greater than the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

Z - Chromatographic interference due to polychlorinated biphenyl (PCB) co-elution.

\* - Value not within control limits.

<sup>1</sup>The pH preservation check of Oil and Grease (Method 1664) and Total Organic Carbon (Method 5310B) are performed as soon as possible after sample receipt and may not be included in this report.  
<sup>2</sup>The pH preservation check of aqueous volatile samples is not performed until after the analysis of the sample to maintain zero headspace and is not included in this report.  
<sup>3</sup>Samples received for pH analysis are not marked as a hold time exceedance here. SW-846 methods suggests analysis to be done within 15 minutes of sample collection. Because of transportation time it is not possible for the laboratory to perform the test in that time. Sample Certificates of Analysis reports are noted as such.  
<sup>4</sup>Samples arriving at the laboratory after 4:00 pm are assigned a due date as if they arrived the following business day unless other arrangements have been made. The due date represents the date the lab report is expected to be completed on or before 5:00 pm (EST) for the date specified.  
<sup>5</sup>All samples which require thermal preservation shall be considered acceptable when received greater than 6 degrees Celsius if they are collected on the same day as received and there is evidence that the chilling process has begun, such as arrival on ice. Control limits are between 0-6 Degrees Celsius. Control limits do not apply for metals analysis.  
<sup>6</sup>Samples requesting analysis for Orthophosphate (SM 4500-P E-99,-11) require the samples to be filtered in the field within 15 minutes of the sampling event. Samples that are received unfiltered will be noted as not method compliant on the Certificates of Analysis.

Laboratory Qualifiers:

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.  
 PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.  
 U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

**Sample Calculation**

First Order (1/X) Weighted Linear Regression with intercept Initial Calibration

$$sc = (Y - A) / B$$

Y = Response uV-sec (sum of 5 quant peaks)  
 A = Constant (intercept) uV-sec  
 B = First Order Coefficient (slope)  
 sc = Solution Concentration (ng/mL)

**Solution Concentration (sc)**

Aroclor 1221       $sc = \frac{3458.664982 - -16.185578}{251.658479} = 13.8078 \text{ ng/mL}$

$$fc = \frac{(sc)(vt)(df)}{(wv)}$$

vt = Extract Volume (mL)  
 df = Analytical Dilution Factor  
 wv = dry weight or volume of sample used  
 sc = Solution Concentration (ng/mL)  
 fc = Final Concentration

**Final Concentration (fc)**

Aroclor 1221       $fc = \frac{13.8078 \text{ ng/mL} * 5.0 \text{ mL} * 1}{980 \text{ mL}} = 0.0704 \text{ ug/L}$

|   | Analyte      | Correlation Coefficient | Equation                    | Value A    | Value B    |

Laboratory Qualifiers:

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the PQL.

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

System Name: Instrument\_28\_Ch01 Date Calibrated: 3/13/2015 8:27:00 AM EDT  
Sample Set Name: GC28F\_LLCC\_031215 Method Report: CCSum by RF 02  
Sample Set Date: 3/12/2015 11:57:41 AM EDT User Name: Angela Racine (AngelaR)  
Processing Method: GC28F\_LLCC\_031215

Calibration Component Summary  
Table

Component Summary For RF

|           | Sample Name | A 1262    |
|-----------|-------------|-----------|
| 1         | 031262A     | 1299.1451 |
| 2         | 031262B     | 1474.0539 |
| 3         | 031262C     | 1315.0821 |
| 4         | 031262D     | 1359.0903 |
| 5         | 031262E     | 1225.6906 |
| Mean      |             | 1334.612  |
| Std. Dev. |             | 91.578    |
| % RSD     |             | 6.86      |

7E-2  
PCB CALIBRATION VERIFICATION SUMMARY

Laboratory Name: Pace Analytical Services, Inc.  
 ELAP ID No: 11078  
 Instrument ID: GC28F  
 GC Column: Phenomenex, Zebron ZB-1MS, 20 m, 0.18 mm ID, 0.18 µm

SGD NO: 15060055

Laboratory Qualifiers:

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

<sup>1</sup>Qualifier column where \*R\* denotes value outside the control limits or \*D\* denotes value was diluted.

ND: Denotes analyte not detected at a concentration greater than the PQL.

PQL (Practical Quantitation Limit). Denotes lowest analyte concentration reportable for the sample.

This is not a NYSDOH ELAP certified method.

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

| Surrogate               | CAS No.   | % Recovery | Limits (%) | Q <sup>1</sup> | File ID       |
|-------------------------|-----------|------------|------------|----------------|---------------|
| Tetrachloro-meta-xylene | 877-09-8  | 89.4       | 70.0-130   |                | GC28F-1633-32 |
| Decachlorobiphenyl      | 2051-24-3 | 76.7       | 70.0-130   |                | GC28F-1633-32 |

<sup>1</sup>Qualifier column where "R" denotes value outside the control limits or "D" denotes value was diluted.

ND: Denotes analyte not detected at a concentration greater than the PQL.

PQL (Practical Quantitation Limit). Denotes lowest analyte concentration reportable for the sample.

This is not a NYSDOH ELAP certified method.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the PQL.

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

# CASE NARRATIVE

June 04, 2015

CASE NARRATIVE

This data package (SDG ID: 15060056) consists of 2 water samples received on 6/3/2015. The samples are from Project Name: HUDSON RIVER RAMP.

This sample delivery group consists of the following samples:

| <u>Lab Sample ID</u> | <u>Client ID</u>       | <u>Collection Date</u> |
|----------------------|------------------------|------------------------|
| AS11507              | FRS-LOC5-T150603081650 | 6/3/2015 06:00         |
| AS11508              | FRS-WAFA-T150603081740 | 6/3/2015 06:00         |

Sample Delivery and Receipt Conditions

- (1.) Lab provided sample pickup service on 6/3/2015.
- (2.) All samples were received at the laboratory intact and within holding times.
- (3.) All samples were received at the laboratory properly preserved, if applicable.

PCB Aroclor Analysis

Analysis for PCB Aroclors was performed by NE273\_04 (Quick TAT Aroclor Method). The following technical and administrative items were noted for the analysis:

- (1.) The concentration results for Aroclor 1242 were flagged (AD) to denote that an altered Aroclor pattern was observed. Please see Form 1 for details.
- (2.) The concentration results for Aroclor 1254 were flagged (AF) to denote that an altered Aroclor pattern was observed. Please see Form 1 for details.
- (3.) The concentration result for Aroclor 1221 was flagged (PB) to denote that Aroclor 1221 is being used to quantify an altered Aroclor pattern. Actual Aroclor 1221 was not presumed to be present in the sample(s). Please see associated Form 1 for details.

Total Suspended Solids by SM 2540D

Analysis for Total Suspended Solids (TSS) was performed by SM 2540D (PACE SOP NE117\_06). The following technical and administrative items were noted for the analysis:

- (1.) All quality assurance parameters were met for this analysis, unless otherwise noted.

Respectfully submitted,

William A. Kotas  
Assistant General Manager

# QUALIFIERS

## **Definitions**

B - Denotes analyte observed in associated method blank or extraction blank. Analyte concentration should be considered as estimated.

D - Surrogate was diluted. The analysis of the sample required a dilution such that the surrogate concentration was diluted outside the laboratory acceptance criteria.

E - Denotes analyte concentration exceeded calibration range of instrument. Sample could not be re-analyzed at secondary dilution due to insufficient sample amount, quick turn-around request, sample matrix interference or hold time excursion. Concentration result should be considered as estimated.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the Practical Quantitation Limit (PQL).

MDL – Method Detection Limit. Denotes lowest analyte concentration observable for the sample based on statistical study.

P - Indicates relative percent difference (RPD) between primary and secondary gas chromatograph (GC) column analysis exceeds 40 % or indicates percent difference (PD) between primary and secondary gas chromatograph (GC) column analysis exceeds 25 %.

PQL – Practical Quantitation Limit. Denotes lowest analyte concentration reportable for the sample.

U - Denotes analyte not detected at concentration greater than the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

Z - Chromatographic interference due to polychlorinated biphenyl (PCB) co-elution.

\* - Value not within control limits.

<sup>1</sup>The pH preservation check of Oil and Grease (Method 1664) and Total Organic Carbon (Method 5310B) are performed as soon as possible after sample receipt and may not be included in this report.  
<sup>2</sup>The pH preservation check of aqueous volatile samples is not performed until after the analysis of the sample to maintain zero headspace and is not included in this report.  
<sup>3</sup>Samples received for pH analysis are not marked as a hold time exceedance here. SW-846 methods suggests analysis to be done within 15 minutes of sample collection. Because of transportation time it is not possible for the laboratory to perform the test in that time. Sample Certificates of Analysis reports are noted as such.  
<sup>4</sup>Samples arriving at the laboratory after 4:00 pm are assigned a due date as if they arrived the following business day unless other arrangements have been made. The due date represents the date the lab report is expected to be completed on or before 5:00 pm (EST) for the date specified.  
<sup>5</sup>All samples which require thermal preservation shall be considered acceptable when received greater than 6 degrees Celsius if they are collected on the same day as received and there is evidence that the chilling process has begun, such as arrival on ice. Control limits are between 0-6 Degrees Celsius. Control limits do not apply for metals analysis.  
<sup>6</sup>Samples requesting analysis for Orthophosphate (SM 4500-P E-99,-11) require the samples to be filtered in the field within 15 minutes of the sampling event. Samples that are received unfiltered will be noted as not method compliant on the Certificates of Analysis.

Laboratory Qualifiers:

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

AF-Aroclor 1254 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the PQL.

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

**Sample Calculation**

First Order (1/X) Weighted Linear Regression with intercept Initial Calibration

$$sc = (Y - A) / B$$

Y = Response uV-sec (sum of 5 quant peaks)  
 A = Constant (intercept) uV-sec  
 B = First Order Coefficient (slope)  
 sc = Solution Concentration (ng/mL)

**Solution Concentration (sc)**

Aroclor 1221       $sc = \frac{6352.910755 - -16.185578}{251.658479} = 25.3085 \text{ ng/mL}$

$$fc = \frac{(sc)(vt)(df)}{(wv)}$$

vt = Extract Volume (mL)  
 df = Analytical Dilution Factor  
 wv = dry weight or volume of sample used  
 sc = Solution Concentration (ng/mL)  
 fc = Final Concentration

**Final Concentration (fc)**

Aroclor 1221       $fc = \frac{25.3085 \text{ ng/mL} * 5.0 \text{ mL} * 1}{960 \text{ mL}} = 0.132 \text{ ug/L}$

|   | Analyte      | Correlation Coefficient | Equation                    | Value A    | Value B    |

Laboratory Qualifiers:

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.  
 AF-Aroclor 1254 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.  
 PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.  
 J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the PQL.  
 U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

TCMX=TETRACHLOROMETAXYLENE

DCBP=DECACHLOROBIPHENYL

<sup>1</sup> Response factor calculated using total area of 5 peaks used to quantitate each Aroclor. Mean response factor not used in Aroclor quantitation, calibration curve by linear regression used for quantitation. Concentrations are nominal values, please see Calibration Curve Report Point Table for actual values.

# INITIAL/CONTINUING CALIBRATION DATA (GC28F)

7E-1  
PCB CALIBRATION VERIFICATION SUMMARY

Laboratory Name: Pace Analytical Services, Inc.

SDG NO: 15060056

ELAP ID No: 11078

Instrument ID: GC28F

GC Column: Phenomenex, Zebron ZB-1MS, 20 m, 0.18 mm ID, 0.18 µm

| COMPOUND     | LAB FILE ID   | LAB SAMPLE ID | CALIB TYPE | CALC AMOUNT (ng/mL) | NOM AMOUNT (ng/mL) | PERCENT DIFFERENCE | Q | DATE / TIME ANALYZED |

| 11096-82-5 | Aroclor 1260  | 0.0250                | U |

Laboratory Qualifiers:

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

<sup>1</sup>Qualifier column where \* denotes value outside the control limits or 'D' denotes value was diluted.

ND: Denotes analyte not detected at a concentration greater than the PQL.

PQL (Practical Quantitation Limit). Denotes lowest analyte concentration reportable for the sample.

This is not a NYSDOH ELAP certified method.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the PQL.

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

AF-Aroclor 1254 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

ND: Denotes analyte not detected at a concentration greater than the PQL.

PQL (Practical Quantitation Limit). Denotes lowest analyte concentration reportable for the sample.

This is not a NYSDOH ELAP certified method.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the PQL.

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

AF-Aroclor 1254 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

# CASE NARRATIVE

June 25, 2015

CASE NARRATIVE

This data package (SDG ID: 15060107) consists of 7 water samples received on 06/04/2015. The samples are from Project Name: HUDSON RIVER RAMP.

This sample delivery group consists of the following samples:

| <u>Lab Sample ID</u> | <u>Client ID</u>         | <u>Collection Date</u> |
|----------------------|--------------------------|------------------------|
| AS11827              | FRS-FDBL-T150603120634   | 06/03/2015 11:58       |
| AS11828              | FRS-STWA-T150603120444   | 06/03/2015 12:04       |
| AS11829              | NRS-162.90-T150603081831 | 06/03/2015 06:00       |
| AS11830              | NRS-186.00-T150603081924 | 06/03/2015 06:00       |
| AS11831              | NRS-187.70-T150603082254 | 06/03/2015 06:00       |
| AS11832              | NRS-189.10-T150603082057 | 06/03/2015 06:00       |
| AS11833              | NRS-BDUP-T150603081852   | 06/03/2015             |

Sample Delivery and Receipt Conditions

- (1.) Lab provided sample pickup service on 06/04/2015.
- (2.) All samples were received at the laboratory intact and within holding times.
- (3.) All samples were received at the laboratory properly preserved, if applicable.

PCB Aroclor Analysis

Analysis for PCB Aroclors was performed by NE273\_04 (Quick TAT Aroclor Method). The following technical and administrative items were noted for the analysis:

- (1.) The concentration results for Aroclor 1242 were flagged (AD) to denote that an altered Aroclor pattern was observed. Please see Form 1 for details.
- (2.) The concentration result for Aroclor 1221 was flagged (PB) to denote that Aroclor 1221 is being used to quantify an altered Aroclor pattern. Actual Aroclor 1221 was not presumed to be present in the sample(s). Please see associated Form 1 for details.
- (3.) Samples (LAB ID: AS11828, AS11830, AS11831, and AS11833) and including quality control samples (LAB ID: AS11838B and AS11838L) were re-analyzed due to chromatographic interference from a non-target contaminant pattern originated from the sample injection. Results for the re-analysis are provided with RR1 sample ID suffix.

Total Suspended Solids by SM 2540D

Analysis for Total Suspended Solids (TSS) was performed by SM 2540D. The following technical and administrative items were noted for the analysis:

- (1.) All quality assurance parameters were met for this analysis, unless otherwise noted.

Respectfully submitted,

William A. Kotas  
Assistant General Manager

# QUALIFIERS

## **Definitions**

B - Denotes analyte observed in associated method blank or extraction blank. Analyte concentration should be considered as estimated.

D - Surrogate was diluted. The analysis of the sample required a dilution such that the surrogate concentration was diluted outside the laboratory acceptance criteria.

E - Denotes analyte concentration exceeded calibration range of instrument. Sample could not be re-analyzed at secondary dilution due to insufficient sample amount, quick turn-around request, sample matrix interference or hold time excursion. Concentration result should be considered as estimated.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the Practical Quantitation Limit (PQL).

MDL – Method Detection Limit. Denotes lowest analyte concentration observable for the sample based on statistical study.

P - Indicates relative percent difference (RPD) between primary and secondary gas chromatograph (GC) column analysis exceeds 40 % or indicates percent difference (PD) between primary and secondary gas chromatograph (GC) column analysis exceeds 25 %.

PQL – Practical Quantitation Limit. Denotes lowest analyte concentration reportable for the sample.

U - Denotes analyte not detected at concentration greater than the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

Z - Chromatographic interference due to polychlorinated biphenyl (PCB) co-elution.

\* - Value not within control limits.

<sup>1</sup>The pH preservation check of Oil and Grease (Method 1664) and Total Organic Carbon (Method 5310B) are performed as soon as possible after sample receipt and may not be included in this report.  
<sup>2</sup>The pH preservation check of aqueous volatile samples is not performed until after the analysis of the sample to maintain zero headspace and is not included in this report.  
<sup>3</sup>Samples received for pH analysis are not marked as a hold time exceedance here. SW-846 methods suggests analysis to be done within 15 minutes of sample collection. Because of transportation time it is not possible for the laboratory to perform the test in that time. Sample Certificates of Analysis reports are noted as such.  
<sup>4</sup>Samples arriving at the laboratory after 4:00 pm are assigned a due date as if they arrived the following business day unless other arrangements have been made.  
 The due date represents the date the lab report is expected to be completed on or before 5:00 pm (EST) for the date specified.  
<sup>5</sup>All samples which require thermal preservation shall be considered acceptable when received greater than 6 degrees Celsius if they are collected on the same day as received and there is evidence that the chilling process has begun, such as arrival on ice. Control limits are between 0-6 Degrees Celsius. Control limits do not apply for metals analysis.  
<sup>6</sup>Samples requesting analysis for Orthophosphate (SM 4500-P E-99,-11) require the samples to be filtered in the field within 15 minutes of the sampling event. Samples that are received unfiltered will be noted as not method compliant on the Certificates of Analysis.

Laboratory Qualifiers:

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

Laboratory Qualifiers:

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

Laboratory Qualifiers:

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

**Sample Calculation**

First Order (1/X) Weighted Linear Regression with intercept Initial Calibration

$$sc = (Y - A) / B$$

Y = Response uV-sec (sum of 5 quant peaks)  
 A = Constant (intercept) uV-sec  
 B = First Order Coefficient (slope)  
 sc = Solution Concentration (ng/mL)

**Solution Concentration (sc)**

Aroclor 1221       $sc = \frac{5180.222385 - -16.185578}{251.658479} = 20.6487 \text{ ng/mL}$

$$fc = \frac{(sc)(vt)(df)}{(wv)}$$

vt = Extract Volume (mL)  
 df = Analytical Dilution Factor  
 wv = dry weight or volume of sample used  
 sc = Solution Concentration (ng/mL)  
 fc = Final Concentration

**Final Concentration (fc)**

Aroclor 1221       $fc = \frac{20.6487 \text{ ng/mL} * 5.0 \text{ mL} * 1}{1070 \text{ mL}} = 0.0965 \text{ ug/L}$

|   | Analyte      | Correlation Coefficient | Equation                    | Value A    | Value B    |

| 11096-82-5 | Aroclor 1260  | 0.0250                | U    |

Laboratory Qualifiers:

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.  
 PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.  
 J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the PQL.  
 U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

Laboratory Qualifiers:

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

Laboratory Qualifiers:

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

TCMX=TETRACHLOROMETAXYLENE

DCBP=DECACHLOROBIPHENYL

<sup>1</sup> Response factor calculated using total area of 5 peaks used to quantitate each Aroclor. Mean response factor not used in Aroclor quantitation, calibration curve by linear regression used for quantitation. Concentrations are nominal values, please see Calibration Curve Report Point Table for actual values.
